

# Potential Impacts of Climate Change on U.S. Transportation

Briefing to The Road Gang  
March 13, 2008

Transportation Research Board  
Division on Earth and Life Studies  
National Research Council

# STUDY FOCUS

Potential consequences of climate change  
on transportation and adaptation strategies

--Why adaptation?

--Which transportation facilities?

# STUDY SPONSORS

- Transportation Research Board
- National Cooperative Highway Research Program
- U.S. Department of Transportation
- Transit Cooperative Research Program
- U.S. Environmental Protection Agency
- U.S. Army Corps of Engineers

# Committee on Climate Change and U.S. Transportation

**Henry G. Schwartz, Jr. (NAE)**, *Chair*, Sverdrup/Jacobs Civil, Inc.  
(retired)

**Alan C. Clark**, Houston-Galveston Area Council, Houston, Texas

**G. Edward Dickey**, Loyola College, Baltimore, Maryland

**George C. Eads**, CRA International, Washington, D.C.

**Robert E. Gallamore**, The Gallamore Group, Rehoboth Beach,  
Delaware

**Genevieve Giuliano**, University of Southern California, Los  
Angeles

**William J. Gutowski, Jr.**, Iowa State University, Ames

# Committee on Climate Change and U.S. Transportation (cont'd)

**Randall H. Iwasaki**, California Department of Transportation,  
Sacramento

**Klaus H. Jacob**, Columbia University, Palisades, New York

**Thomas R. Karl**, National Oceanic and Atmospheric  
Administration, Asheville, North Carolina

**Robert J. Lempert**, The Rand Corporation, Santa Monica,  
California

**Luisa Paiewonsky**, Massachusetts Highway Department, Boston

**S. George H. Philander (NAS)**, Princeton University, Princeton,  
New Jersey (through 12/06)

**Christopher R. Zeppie**, The Port Authority of New York and  
New Jersey, New York City

# NRC STUDY COMMITTEE PROCESS

- Formation of committee
- Committee deliberation
- Preparation of draft report
- Independent review of report
- Report publication and dissemination

# STUDY CHARGE

- Provide overview of scientific consensus regarding climate change
- Identify potential impacts on U.S. transportation and adaptation options
- Summarize previous work on mitigation strategies
- Provide recommendations on necessary research and policies

# STUDY APPROACH

- Five commissioned papers
- One-day conference (October 2006)
- Briefings at committee meetings
- Consensus committee report

# MAIN FINDINGS

- Global warming is occurring, and future climate changes are unlikely to unfold gradually (i.e., weather extremes and surprises).
- Historical climate patterns may no longer be a reliable planning guide.
- Impacts will affect all U.S. regions and all transportation modes – flooding of coastal infrastructure potentially the greatest impact
- Climate changes will require significant changes in how transportation professionals plan, design, operate, and maintain the infrastructure
- Today's investment decisions will affect how well the infrastructure adapts to climate change far into the future

# Globally averaged surface air temperature and CO<sub>2</sub> concentrations since 1880

***Positive proof of global warming.***

**18th  
Century**

**1900**

**1950**

**1970**

**1980**

**1990**

**2006**

# THE SCIENCE: CLIMATE CHANGES OCCURRING OVER THE NEXT 50-100 YEARS OF RELEVANCE FOR TRANSPORTATION

- Rising sea levels (virtually certain)
- Increases in very hot days and heat waves (very likely)
- Increases in Arctic temperatures (virtually certain)
- Increases in intense precipitation events (very likely)
- Increases in hurricane intensity (likely)

# IMPACTS ON TRANSPORTATION

- **Rising sea levels added to storm surge**
  - More frequent flooding of tunnels and low lying infrastructure
  - Inundation of roads, rail lines, and runways in coastal areas
  - Closure or restrictions for several top 50 airports in coastal zones
- **Increase in very hot days / heat waves**
  - Thermal expansion – bridges and pavements
  - Rail track deformations
  - Lift-off limits at hot weather airports
  - Limitations on hours of construction

# IMPACTS ON TRANSPORTATION

- **Increase in Arctic temperatures**
  - More ice-free northwest passage and longer ocean transport season
  - Thawing of permafrost – subsidence of highways, rail beds, pipelines, and runways
  - Shorter season for ice roads
- **Increase in intense precipitation events**
  - Traffic disruptions
  - Flooding of roadways, rail lines, runways
  - Scouring of pipeline supports and bridge foundations

# IMPACTS ON TRANSPORTATION

- **More frequent strong hurricanes**
  - More frequent and costly evacuations
  - Greater probability of infrastructure failures - failure of bridge decks
  - Damage to ports and harbors

# RECOMMENDATIONS

## Decision Framework and Data

- Inventory critical infrastructure, particularly in vulnerable locations
- Incorporate climate change in investment plans and decisions
- Adopt strategic, risk-based approaches to decision making
- Improve communication and establish information clearinghouse (NOAA, USDOT, USGS)

# RECOMMENDATIONS (cont'd)

## Adaptation Strategies

- Operations: integrate emergency response into transportation operations (and vice versa) to handle weather and climate extremes
- Design:
  - Reevaluate design standards – develop a research plan and cost proposal for Congressional action
  - Rebuild infrastructure in vulnerable locations to higher standards
- Monitoring: Develop new technologies to track conditions and warn of pending failure

# BRIDGE DAMAGE FROM HURRICANE KATRINA--IMPETUS FOR NEW COASTAL BRIDGE DESIGN STANDARDS

# RECOMMENDATIONS (cont'd)

## Adaptation Strategies

- Technology transfer: Develop a mechanism for sharing best practices (AASHTO, FHWA, other professional organizations)
- Transportation and land use planning: incorporate climate change in investment and development decisions
- Flood insurance: reevaluate National Flood Insurance Program and update flood zone maps to account for sea level rise
- New organizational arrangements: develop regional and multistate structures to address climate change impacts and create a federal interagency working group on adaptation

# RECOMMENDATIONS REQUIRING A FEDERAL ROLE

- Clearinghouse for information exchange on climate change and transportation (NOAA, USDOT, USGS, relevant others)
- Research program to reevaluate design standards (USDOT lead + Congress)
- Interagency working group on adaptation (UDOT lead)
- Revised federal requirements for long-range planning and infrastructure rehabilitation (Congress)
- Reconsideration of National Flood Insurance Program (FEMA)

# WHERE TO BEGIN?

- Which climate changes most relevant for a region?
- How are climate changes likely to be manifest?
- What transportation assets will be affected?
- What performance levels are required?
- What level of investment is needed?
- What are the risks if no action is taken?
- Who will make these judgments and decisions?
- How will investment priorities be determined?
- How will they be funded?

# HOW TO ACCESS THE REPORT
